

01. [Diverio, 2000] Desenvolver uma máquina de Turing, sobre o alfabeto  $\{a, b\}$ , que verifique o duplo balanceamento da entrada fornecida pelo usuário, ou seja,  $D = \{a^n b^n \mid n \geq 0\}$ . A seguir, são apresentados alguns exemplos de entradas possíveis de serem fornecidas pelo usuário com seus respectivos resultados.

Entrada – Fita	Saída – Fita	Status
aabb	indiferente	aceita
bbaa	indiferente	rejeita
abab	indiferente	rejeita
ab	indiferente	aceita
$\beta$	indiferente	aceita
